CSIT357: Final Project Topic

Topic: The Power of Generative A.I.

Objective: Our project will explore what generative A.I. is and how it creates hyper realistic digital content, such as images, videos, and audio. We will focus on the growing impact of this technology in society, the opportunities it brings, and the ethical risks. We will implement a Python code that trains a model to detect whether an image is real or artificially generated. This will show how A.I. generated media can be recognized and verified using machine learning.

Team Members & Contributions:

Emily Nunez:

Slide 1: Intro & Project Title
Slide 2: What is Generative A.I.?
Slide 3: How Generative A.I. Works
Python code

Angelee Sullivan-Quintana:

Slide 4: A.I. Generated Media
Slide 5: Real world Applications
Python code

Khushi Patel:

Slide 6: Brief python project explanation
Slide 7: Run code model (Detects if image is A.I. or real)
Python code

Rashmi Raveendran:

Slide 8: Benefits of Generative A.I.
Slide 9: Dangers & Ethical Concerns
Slide 10: Concluding slide
Python code
